

MAKING THE TEACHING/LEARNING PROCESS A CREATIVE EXPERIENCE: LESSONS FROM BAYARDO

Hernan Chaimovich, Departamento de Bioquímica, Instituto de Química da Universidade de São Paulo São Paulo, SP, Brasil CEP 05508 000

In this communication I will present, based on thirty plus years of professional and personal contact, a personal description/analysis of part of the academic journey of Bayardo B Torres. I will start by demonstrating the significance of giving attention to the summary of the personal data published by the Brazilian National Research Council (CNPq) in the Lattes System. Bayardo's summary reads "he obtained his PhD in Biological Sciences(Biochemistry) at the University of São Paulo (1972) and was a post-doc at the Université Catholic de Louvain (1987). Presently he is Assistant Professor at the University of São Paulo. He has experience in the area of Biochemistry, with emphasis in Biochemistry Teaching. His main interests are concentrated in the following themes: microsomes, protein synthesis, membranes". With due respect to the artificial intelligence used to capture essences from CV's it will be my pleasure to demonstrate, using data and testimony, that the contributions of Bayardo so far exceed by orders of magnitude this description.
